Services

Successfully uploaded file tomcat.zip to S3, created application version and started deployment with new application version

Environment update successfully completed.

Elastic Beanstalk > Environments > c9058-samp-ZoSWvumFei4F > Configuration

Configure networking and database Info

Virtual Private Cloud (VPC)

VPC
Launch your environment in a custom VPC instead of the default VPC. You can create a VPC and subnets in the VPC management console.
[Learn more](#)

Create custom VPC

Instance settings

Choose a subnet in each AZ for the instances that run your application. To avoid exposing your instances to the Internet, run your instances in private subnets and load balancer in public subnets. To run your load balancer and instances in the same public subnets, assign public IP addresses to the instances. [Learn more](#)

Public IP address
Assign a public IP address to the Amazon EC2 instances in your environment.
